Secureworks®

Threat Hunting Assessment

Boost cyber resiliency by identifying undetected threats and uncovering security control gaps

Lower Your Cyber Risk

Reducing cyber risk is a critical objective for all organizations, as threat actors continue honing their tactics, techniques, and procedures to bypass security programs and defense strategies. Organizations need to raise their cyber resilience to defend against these increasingly difficult to detect threats. Average dwell times between initial access and ransomware payload delivery have dropped to a median of just 24 hours[1]. Supply chain attacks, infostealer activity, and state-sponsored threat activity emphasize the need for organizations to understand their risk profile. Proactively uncovering threats is an important step in elevating your cyber resiliency and lowering risk.

Bolster Your Cyber Defenses with Secureworks

Secureworks® Threat Hunting Assessment delivers a comprehensive and intensive evaluation of your environment to identify unknown compromise activity and cyberthreats that could evade your existing security defenses. Our expert threat hunting team possesses the knowledge of attack patterns, experience, and the right technology to conduct analysis at scale across on-premises and cloud environments. The Secureworks Taegis™ platform is used to deliver our threat hunting capabilities, powered by advanced security analytics and vast insights from processing more than 700 billion events daily. Our proprietary CTU™ Threat Graph contains 40 billion unique pieces of threat intelligence, enabling Secureworks to quickly detect threats that bypass traditional hunting and detection methods. We leverage elite cyberthreat intelligence and proprietary hunting technologies, as well as decades of combined experience countering targeted adversary tradecraft, to identify the presence of historical and active compromises entrenched within your environment, and provide detailed reporting on findings and best practices to harden your security posture and reduce your security risk.

CUSTOMER BENEFITS

Build cyber resilience with focused, tailored recommendations

Reduce dwell time and increase mean time to detect and remediate threats

Increase confidence in confidentiality, integrity and availability of systems and data

Decrease the number and impact of security incidents with finding-based improvement

Improve speed, efficiency and accuracy of incident response processes

Reduce security risks in the environment mapped to standardized framework

How Secureworks Helps

Identify what risks are hiding within your environment:

Identify Undetected Threats

Rely on our security experts, advanced analytics and tools to scour your environment for threats that have bypassed detection. If threats are found, we will perform in-depth analysis, focusing on intent, opportunity and capability of threat causing damage.

Pinpoint Security Risks

Throughout the threat hunt, Secureworks will uncover security risks within the environment that often contribute to major breaches and incidents.

Discover Security Controls Gaps

Determine what gaps exist in your defenses and receive actionable guidance to improve your defenses and security posture. Guidance may address weaknesses in your security architecture, policies and personnel that, when implemented, will help mitigate active threats and help prevent future threats.

Inform Incident Response

Take findings from the engagement to shore up visibility gaps and inform your security resources on actionable improvements. Customers often use assessment results to create new detection capabilities and establish baselines.

SECUREWORKS DIFFERENTIATORS

Tailored to your unique risks and concerns

Performed by experienced, dedicated hunters backed by advanced security analytics

Includes wide range of telemetry, including endpoint, network, cloud and more

Reporting on visibility gaps, asset enumeration and profiling of system activity mapped to CIS framework

Rapid Emergency Incident Response can be provided if high-severity compromise found
